Allowable Subject Matter

1. Claims 1-21 are allowed.

Independent claims 1, 9, 17, and 20 recite a method for motion region classification in a moving image including "...identifying a plurality of motion classes for a frame of video data, each motion class having at least one region classified thereto wherein a region is poorly classified if it is classified as belonging to an improper class', determining a region to be a poorly classified region forming a set of class hypotheses for the poorly classified region, the set of class hypotheses containing at least one possible motion class; determining a similarity measure for the poorly classified region with respect to a set of past and future video data, the similarity measure indicating a degree of consistency between a hypothesis for the motion of the poorly classified region and the motion of the corresponding regions in past and future frames; and , reclassifying the poorly classified region to one of the at least one possible motion classes according to the similarity measure..." which is a feature that is not anticipated nor obvious over the art of record. Dependent claims 2-8, 10-16, 18-19, and 21 are allowable for the reasons concerning the independent claims.
